CSE 340: Software Engineering Project 2

Team Assignment: Campus Food Finder
Due: Friday, November 20, 2026 at 11:59 PM

Overview

In teams of 4 to 6, you will design and build a small web application that helps students find open food options on campus. You will gather requirements from at least five students, design the interface, implement a working prototype, and present your work to the class.

Requirements

1. Conduct and summarize user interviews with at least 5 students (1 page summary).
2. Write a requirements document with at least 10 user stories and acceptance criteria.
3. Produce wireframes for at least 4 screens and a clickable mockup.
4. Implement a working prototype (React or similar) with a searchable list of food locations and their hours.
5. Load and clean the provided dining hours dataset (CSV) and expose it through a simple API.
6. Write unit tests covering the search and hours logic (at least 70% coverage).
7. Write a 6 to 8 page final report covering design decisions, testing, and reflections.
8. Give a 10 minute in-class presentation with a live demo.

Deliverables

- GitHub repository link with README
- Final report (PDF)
- Presentation slides

Grading Rubric

Requirements and interviews 15%. Design and wireframes 15%. Implementation 30%. Testing 15%. Report 15%. Presentation 10%.

Late submissions lose 10% per day. All team members must contribute; peer evaluations will adjust individual grades.
